Service Level & Escalation Policy

Document POL-OPS-2026 · Version 1.3 · Effective 1 January 2026 · Owner: Head of Field Operations

1. Purpose and scope

This policy defines the service levels Contoso DIY Home Services commits to customers, and the escalation steps managers must follow when those levels are at risk. It applies to every work order in all ten operating cities: Bordeaux, Grenoble, Lille, Lyon, Marseille, Montpellier, Nantes, Paris, Rennes and Toulouse.

2. Work-order statuses

Status	Meaning
pending	Created by a manager, not yet assigned to a service pro.
assigned	Assigned to a service pro who has not started the job.
in_progress	The service pro is on site or the job has started.
completed	Work finished and accepted by the customer.
needs_followup	Work done but a revisit is required (parts missing, defect found, customer not satisfied).
cancelled	Cancelled by the customer or by Contoso DIY.

3. Service-level targets

Target	Commitment	Policy ID
Assignment time	A pending work order must be assigned to a qualified service pro within **48 hours** of creation.	SLA-01
Customer confirmation	The customer receives an appointment confirmation within **4 working hours** of assignment.	SLA-02
Follow-up revisit	A work order in needs_followup must be revisited within **5 working days**.	SLA-03
First-time fix rate	At least **85%** of finished jobs per city should be completed without a follow-up.	SLA-04
Cancellation notice	Customers who cancel with less than 24 hours notice may be charged the call-out fee (see CAT-2026).	SLA-05

4. Escalation rules

ESC-01 Regional Operations Review. When a city has **more than 12** work orders in needs_followup status, the city is placed under Regional Operations Review. The regional manager must, within 10 working days:

- assign one extra senior service pro to the city for at least two weeks;
- review every open follow-up with the assigned service pro and record the root cause;
- contact each affected customer by phone and offer a confirmed revisit date;
- report progress weekly to the Head of Field Operations until the count is 12 or fewer.

ESC-02 Unassigned backlog. If more than 10 work orders company-wide are pending for more than 48 hours, the duty manager must hold a same-day assignment call and may assign jobs to service pros from neighbouring cities.

ESC-03 Repeat follow-up. A work order that returns to needs_followup a second time is escalated to the city manager and must be handled by a different service pro with the same primary skill.

ESC-04 Restricted-trade breach. Any electrical, plumbing or HVAC job carried out by a service pro without the matching certified skill (see SAF-2026) is a safety incident and must be reported within 24 hours.

5. Customer communication

Customers affected by a missed SLA receive a goodwill voucher of EUR 20 for a missed assignment target (SLA-01) and EUR 40 for a missed follow-up revisit (SLA-03). Vouchers are approved by the city manager and recorded in the work-order note field.

6. Reporting

Operations reviews SLA performance weekly using the field-services data in Microsoft Fabric. Managers should use the operations assistant to check follow-up counts by city, unassigned work orders and first-time fix rates before each weekly review.
